# Mapping LUNs to the application hosts

You must create an igroup on each cluster so you can map LUNs to the initiator on the application host.

## About this task

You should perform this configuration on both the source and destination clusters.

## Steps

1. Create an igroup on each cluster:

```
lun igroup create -igroup name -protocol fcp|iscsi -ostype os -initiator  
initiator_name
```

### Example

```
lun igroup create -igroup ig1 -protocol iscsi -ostype linux -initiator  
-initiator iqn.2001-04.com.example:abc123
```

2. Map LUNs to the igroup:

```
lun map -path path_name -igroup igroup_name
```

### Example:

```
lun map -path /vol/src1/11 -group ig1
```

3. Verify the LUNs are mapped:

```
lun show
```

4. On the application host, discover the new LUNs.
