Identify and move CIFS servers in workgroup mode 1

Identify and move CIFS servers in workgroup mode

Before performing a revert, you must delete any CIFS servers in workgroup mode or move them in to a domain. Workgroup mode is not supported on ONTAP versions prior to ONTAP 9.

1. Identify any CIFS servers with a Authentication Style of workgroup: `vserver cifs show`
2. Move or delete the servers you identified:

If you are going to...	Then use this command....
Move the CIFS server from the workgroup to an Active Directory domain:	<code>vserver cifs modify -vserver vserver_name -domain domain_name</code>
Delete the CIFS server	<code>vserver cifs delete -vserver vserver_name</code>

3. If you deleted the CIFS server, enter the username of the domain, then enter the user password.
