ONTAP 9 Network Management Documentation

ONTAP System Manager enables rich networking visualization and the ability to download consolidated data about your network. You can learn more in the following topics:

- [View and manage your network](#)
- [Download network data for reporting](#)

You can also set up and manage your network with the ONTAP CLI. The ONTAP 9 CLI network management documentation consists of three main areas:

[Set up NAS path failover for ONTAP 9.8 and later](#)

Learn how to set up NAS path failover using established best practices in ONTAP 9.8 and later

[Set up NAS path failover for ONTAP 9.7 and earlier](#)

Learn how to set up NAS path failover using established best practices in ONTAP 9.7 and earlier.

[Networking reference](#)

The networking reference documentation describes how to configure and manage physical and virtual network ports (VLANs and interface groups), LIFs using IPv4 and IPv6, routing, and host-resolution services in clusters; optimize network traffic by load balancing; and monitor the cluster by using SNMP. Unless otherwise stated, this content applies to all versions of ONTAP 9.
