Display routing information
-----------------------------

### **Display routing information**

You can display information about the routing configuration for each SVM on your cluster. This can help you diagnose routing problems involving connectivity issues between client applications or services and a LIF on a node in the cluster.

#### **Steps**

1. Use the network route show command to display routes within one or more SVMs. The following example shows a route configured in the vs0 SVM:

```
network route show
(network route show)

Vserver Destination Gateway Metric
-----
vs0

0.0.0.0/0 172.17.178.1 20
```

2. Use the network route show-lifs command to display the association of routes and LIFs within one or more SVMs.

The following example shows LIFs with routes owned by the vs0 SVM:

3. Use the network route active-entry show command to display installed routes on one or more nodes, SVMs, subnets, or routes with specified destinations.

The following example shows all installed routes on a specific SVM:

127.0.10.1	127.0.20.1	losk	10	UHS	
	127.0.20.1			UHS	
11.0011011		10011		0110	
Vserver: Data0					
Node: node-1					
	1055 014 /64
